

CM-1000 type Continuous Over Head Conveyor Shot-blasting machine

Application

The CM-1000 type shot blasting machine is designed for blast cleaning castings, forged work-pieces and smaller dimension welded structures.

Description

The machine is mounted with two pieces of ABR-380 blasting turbines. The turbines are positioned on the machine housing in transitioned parallel blasting planes to ensure perfect cleaning effect on the whole surface of the hanging bunches.

The turbines are gravity fed constructions with mechanic accelerator impeller wheel and control cage. The wheels have 6 blades mounted between two parallel plates. These features provide precise blast pattern adjustment. The work-pieces to be cleaned are hung on hangers. These hangers are placed on hand operated conveyor trolleys (optionally electromechanically operated). When the hanger enters the machine housing an automatic mechanism pulls it to blasting positions. Blast cleaning happens behind closed pneumatically operated doors. During cleaning process the hangers continuously rotate in front of the turbines.

When blasting is finished the work-pieces leave on the exit side of the chamber and a new bunch arrives to blasting position.

In the active zones the inner surface of the machine housing is covered with highly wear resistant manganese steel.

Blasting will only be possible, whenever the door is closed; this door assures proper protection against abrasive particles flying out.

The continuous and closed flow loop of abrasive is assured by a collecting hopper with screw, bucket elevator, windscreens, dosing unit and turbines.

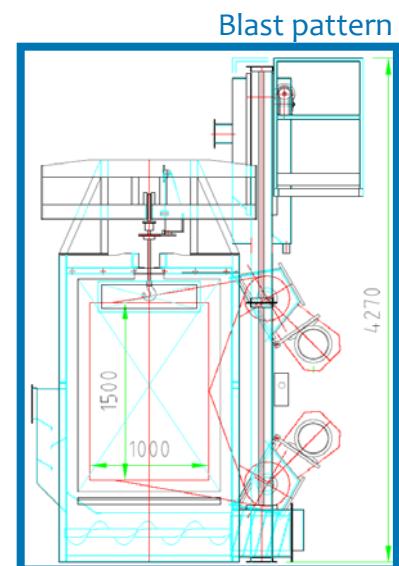

For optimum surface cleanliness the quantity and jet direction of the blasted abrasive can be accurately adjusted.

The conveyor path dimensions and shapes can be adjusted to the client's demands.

To exhaust and filtrate the created dust during blast-cleaning we supply an APSZ type cartridge filter c/w fan and suitable ductwork.

A central control board will be supplied for controlling all functions of the machine.

Normal operation shall be carried out in automatic set position, however there is hand operation option also provided for service functions.

Technical data

Work piece-hanger theoretical max. measures:				
Height		mm	1500	
Diameter		mm	1000	
Turbines:	Quantity	pcs	2	
Type			ABR-380	
Wheel diameter		mm	380	
Wheel speed		f/p	2600	
Abrasive capacity		kg/min/ turbine	130	
Turbine motor power		kW	7,5 /turbine	
Conveyor path	Load capacity	kg/hanger	500	
Supply req.:	Electrical	Machine	kW	22
	Aspiration		kW	4
	Compressed air	Pressure	bar	6
		Air capacity	m ³ /h	7
Abrasive charge:		kg	500	
Recommended abrasive size:		mm	0,2-1,6	
Aspiration fan capacity:		m ³ /h	4000	
Electrical data:	Voltage	V	3 x 400	
	Control voltage	V	110	
	Cycles	Hz	50
