

Dustfree receiving pit

Application

This receiving pit is designed for the dustfree intake of dry, dusty materials from either power shovels or front-end unloaders.

Operation

The truck drops its load onto a large limbed grid with the air flap system. The air suction keeps the intake buliding at negative pressure by wich no dust can escape.

Features

- Compact system.
- Automatical built-in map filters.
- Low-noise fans.

Optional extras

- Roller door.
- Compressor for filter cleaning.
- Discharge conveyor.
- Magnetical grid.

Benefits

- Dustfree operation.
- Continuous re-introduction of separated dust into the product stream.
