

Dustfree bag-dumping unit

Application

The bag-dumping unit is designed for the dust free intake of granular or dusty products stored in plastic or paper bags.

Operation

The bags are shaken empty in the dumping hopper. The emptying of the bags is totally dustfree because the bag-dumping is provided with a filter-unit with a built-in suction-fan.

The emptied bags can be thrown out into a bag compactor (optional).

Features

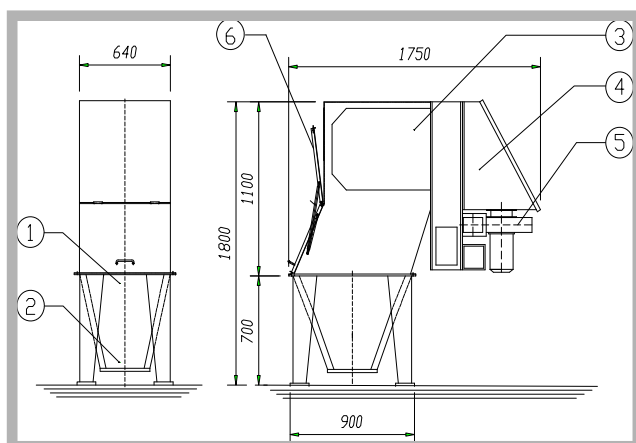

- Compact system.
- Automatic, built-in filter unit.
- Low-noise fan.

Optional extras

- Compressor for filter cleaning.
- Discharge conveyor.
- Bag-compactor.

Benefits

- Dustfree operation.
- Continuous re-introduction of separated dust into the product stream.
